

Epistar LED decklight Gandra | warm white | 1 watt | 24 volts

Product Images

Short Description

This Epistar LED floor spot Gandra of 1 watt is part of the 24-volt garden lighting system. This spot has a 24-volt coupling system and can be combined with all other 24-volt garden lights.

Description

The Gandra spot, with its consumption of 1 Watt, is a suitable decking spot. With its warm white light (2700k) and low consumption, this spot ensures an atmospheric view in your garden. This spot has an IP value of 67 (IP67). This means that this spot is weatherproof and suitable for outdoor use. The spot comes with a 1-metre cable with a 24-volt connector at the end of the cable.

This spot is part of the 24-volt garden lighting system and can therefore be combined with all other 24-volt garden lightings. This spot works with the 24 volts LED transformer or with the 24 volts, Astro LED transformer. Both transformers are not included and should therefore be ordered separately for use with this spotlight. The 'normal' 24-volt LED transformer ensures that the incoming 230 volts are converted to low voltage (24 volts). The Astro transformer does this too, but with this transformer, you can also operate the 24-volt lighting. The Astro can be programmed to 5 different positions.

You can connect up to 80 Watts of different types of 24-volt garden lighting to both transformers. Both transformers are equipped with a plug and, on the other side, a 24-volt connection piece, so that you can attach the 24-volt Gandra spotlights to the transformer. You need to connect the Gandra spotlight to one of the transformers. So, if you do not yet have a 24-volt transformer, you need to add one of the two transformers to your shopping basket.

Using 24-volt extension cables and 24-volt cable connectors, you can connect several Gandra spots with our other 24-volt garden lights. Would you like your Gandra spots to work with a twilight switch or motion detector? That is also possible! A twilight switch and motion detector must be added to your shopping basket separately and are not included in the scope of delivery.

Tip: 24 volts is a low voltage, so you can hide the cables of this spotlight under a thin layer of sand. So, you don't have to dig a deep hole for the cables.

The Gandra spot comes with a 5-year guarantee. More product information can be found in the product specifications. For more information about the Gandra spot or about the 24-volt garden lighting system, please call us, send an e-mail or send a message via chat.

Additional Information

Article number	L2190
EAN code	7435124544537
Brand	Hamulight
LED chip	Epistar
Spot color	Aluminium
Suitable for	Inside & outside
Suitable i.c.w.	Hamulight transformer (Astro) 24 volt & other 24 volt garden lights
Consumption	1 watt
Input voltage	24V DC
Light color	Warm white (2700K)
Lumen per LED (including lens)	50 lm
Color Rendering Index (CRI)	>80
Light angle	120 Degrees
Dimmable	No
Tiltable	No
Cabling per LED	100 cm
Transformer required?	Yes
Diameter	45 mm
Height	25 mm
Hole size	32 mm
Material	Aluminium
IP value	IP67
IK value	IK07
Quality mark	CE, Rohs
Guarantee	5 years
Energy label old	A++
Energy label new	G
